

ScheduleCleaner

Datasheet

ScheduleCleaner is a desktop application for Windows that allows project schedulers, planners, managers and other users to remove or anonymize data deemed confidential within XER / XML project files.

ScheduleCleaner will not change original project plan that is exported from Primavera® P6 database. It will make a copy of it and modification that are done will be saved in the new file.

PM “how to” issues

- How to protect sensitive project data within XER/XML files;
- How to eliminate redundant and repetitive steps when data is removed manually;
- How to prevent loss of information when modifying XER/XML.

Benefits

- Ensure schedule integrity and data security when sharing .xer or xml files;
- Save time spent on manual cleaning .xer or xml files;
- Avoid database pollution from unwanted data
- Cut intermediary DB maintenance and investment costs.

Key features

- **Remove** values for different data categories in the .xer or xml project files such as costs, units, rates, expenses, POBS and more.
- Intentional **obscuring/masking** of the intended meaning of specific project data, so that they are less clear and more difficult for others to understand.
- **Add prefix** or **suffix** to the values of different project data.
- **Changing global data** into project data will mostly refer to keeping data unique for the specific project, without allowing pollution of project source data, specifically when working with calendars and activity codes.

Consistent project information

ScheduleCleaner will not modify the original project plan. Project’s architecture will remain the same, in the form that the Project Scheduler created.

ScheduleReader will create a copy of the original project plan, insert the modifications in it and place it in the defined location.

Technical support

On time, personalized information

Companies that integrate ScheduleCleaner with other tools such as ScheduleReader, will be able to improve communication between all project teams and stakeholders.

When using ScheduleReader and ScheduleCleaner interchangeably, one for quick removal of data from .xer or xml files and the other for viewing the data within the project plan, companies can greatly improve their project productivity, communication and security.

Project data security and integrity

ScheduleCleaner will enable you to quickly remove / anonymize confidential data within .xer or xml files while keeping the schedule integrity.

System Requirements

- Windows 8, Windows 8.1 or Windows 10.
- Intel® 1.4 GHz processor or equivalent.
- 512MB of RAM.
- 200 MB of available hard disk space (during installation).
- 1024x768 @16-bit color (1280x800 @24-bit color or higher recommended).

Save time with process automation

With ScheduleCleaner, you can perform Batch Clean, where the setup of the environment is performed only once. With a few simple clicks in the application, you can create, save and re-use multiple templates containing different modifying settings for a single
